

CargoSoft Special Newsletter | Implementation of ACAS requirements

{Anrede Briefftext}

Welcome to the CargoSoft airfreight special newsletter!

Today we inform you about the **implementation** of the Air Cargo Advance Screening (**ACAS**) requirements of the US Customs in **CargoSoft TMS**. We have summarized the most important information for you in this newsletter. All previous information on ACAS and other newsletters can be found [here](#).

Please forward this information to your colleagues so that they are also up to date. You can also [subscribe to our newsletter](#) at any time.

Your CargoSoft team

Airfreight export | AWB transfer in CargoSoft TMS

Implementation of the requirements of US Customs (ACAS)

In the new TMS dialog window "*eAWB Customs Data*" you will find all the important eAWB customs fields that are required for ACAS (but also for China and other countries):

- **Contact person** (including telephone number, e-mail) and **company code** for the addresses *Shipper*, *Consignee* and *Notify*
- The new **customer account information** for **ACAS**

The data is **pre-assigned**¹ and can therefore be changed directly **in the order**.

In addition to the data required by ACAS, we have included the previous **contact person data** and the **company code** in the new TMS dialog window. The **e-mail** address is a new entry that is also required by ACAS. Previously, the data was only printed from the TMS address master data in the AWB and transferred to the airline.

The new customer account fields include:

- **Holder** - New drop-down menu allows you to choose between “Shipper” or “Consignee”.
- **Customer Account Number** - CargoSoft automatically populates the CargoSoft address number (e.g. D4711 or G0815). The number will be pre-populated for either the “Shipper” or “Consignee” based on your selection in the “Customer Account Holder” field.
- **Issuer** - New text field allows you to enter the “Issuer” directly
- **Establishment Date** - Pre-assignment is made from the establishment date of the address

You can see further fields and corresponding default values in this [screenshot](#).

Here are some screenshots from the application:

Open the dialog window in CargoSoft TMS via the new button “**eAWB Customs Data**” in the **header data** of the order item, or via the **local menu**.

By **default**, the customer is **pre-assigned** with the shipper.¹

ACAS Customer Account Information will only be pre-assigned for AWB-types **IATA**, **HAWB** und **MHAWB**.

1: The default customer account information applies to shipments to and through the USA and Canada (this can be extended to other countries at any time).

What's next?

- Implementation/delivery planned from February 2025 (no guarantee)
- We will keep you up to date on further steps and changes
